

# fluoptics

A new hope for cancer surgery

**"Fluoptics an innovative solution for cancerous tumor resection"**

**We strongly believe that cancerous tumor surgery will be driven by in situ molecular imaging.**

The proposed approach allows to precisely target pathological tissues and to guaranty their complete resection.

**Fluoptics** provides an innovative solution based on an intra-operative fluorescence detector and on fluorescent markers which specifically targets the tumors. This new system guides the surgeon operation in order to lead to a thorough exeresse.

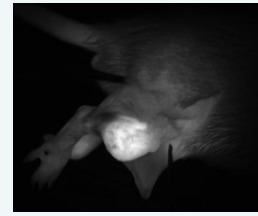

This **non radioactive** technique will increase the life expectancy of patients.

## Applications

Sentinel lymph node detection

Tumor and metastasis targeting

## Products

Intra-operative Imaging System

Preclinical markers

IntegriRaft  
angiogenesis marker

Nano Targ  
Sentinel lymph node  
detection

**A Translational Technology**
